

Description

Logic includes a suite of standard reports in the core solution. These reports are configurable and cover a broad range of reporting needs for meter data, validation, meter communication, event reporting and more. To meet the expanding needs of a utility, Logics modular design provides the utility with options to perform deeper analysis of data that is not provided in the core Logic solution. Advanced Reporting is based on the IBM Cognos reports and allows the utility to create additional reports if desired. Advanced Reporting interfaces to the core Logic solution and uses available data for advanced reporting purposes. Advanced Reporting should be used by highly skilled technical personnel familiar with business intelligence platform and capable of writing their own queries.

Features

REPORTS

Advanced Reporting allows the end user to create their own impulsive queries or customized reports if desired. Report features assist in providing other personnel with information pertinent to their area of responsibility. Users can access the data from the web based application if desired.

DASHBOARDS

Dashboards are used to efficiently and effectively display results to key personnel. This solution allows end users to customize dashboards in order to meet individual styles. The dashboard serves to present the information in order to view and analyze data. With the customization feature,

users can customize and organize reports according to the needs of the intended audience.

ANALYSIS

With built in analysis capabilities, viewing data from different angles and perspectives becomes an easy task. Features such as analytic reporting, trend analysis, statistical analysis, and more provide multiple options to view and analyze data.

SCORECARDING

Scorecarding allows the users to compare key performance indicators (KPIs) to meet their strategic goals. Once reports are created and filtered to key personnel, this information can be

used to assist in keeping strategic goals. Scorecarding can be used across multiple departments in order to share information across the organization.

Advanced Reporting is a web based solution and therefore provides a simple application that can be easily adapted. For personnel that would like additional reports beyond the core Logic solution, Advance Reporting can provide that solution. Advanced Reporting will serve those individuals that desire to create reports, analyze, compare and measure KPIs.
